PROGRESS REPORT
MARICAO FISH HATCHERY OPERATION AND MAINTENANCE

State : Puerto Rico
Grant Title : Maricao Fish Hatchery Operation and Maintenance
Grant Number : F-35-12
Period Covered : Jan 1, 2010 to Dec 31, 2010

A – MAINTENANCE

Job 1 - Facilities Maintenance

OBJECTIVE 1
To maintain and improve hatchery facilities.

a. Activities

1.1- Maintenance of ponds, water supply system, gabions and hatchery grounds
Control undesirable vegetation in spawning ponds (two times per month) and hatchery grounds (once a week). Clean plastic liners, kettles and valves (after each harvest). Repair and clean sediment trap at the dam (as required). Maintain sidewalks, roads, landscaping and parking gate (once a week), dikes (two times per month), and repair gabions (as required).
- Completed but not as scheduled

1.2- Maintenance of structures
Includes routine maintenance (daily), reparations (as required) and painting (2 times per year) of the following structures: restrooms, office, future visitor center, nursery building, feed and materials storage building, electrical pedestal at the six growout pond kettles, and railing at each walkway above the kettles.
- As scheduled

1.3- Maintenance of concrete tanks
Includes draining and cleaning (two times per month), repair (as necessary), and painting (once per year) five rectangular tanks (three 60’ x 17’ x 4’ and two 60’ x 21’ x 5’), and twenty-four rectangular tanks (12’ x 5’ x 2 1/2’).
- As scheduled

1.4- Maintenance of equipment
Perform maintenance on the following hatchery equipment:
two pick-up trucks, two mule vehicles, trimmers, lawnmowers, blowers, aerators, live hauler tank, water pumps, welder, electrical generator, manholes at the dam, tools, (as necessary).
Perform maintenance on the following nursery equipment:
• hatching jars, pumps, tanks, filters, glass aquaria, refrigerator, generator, air blower, piping, etc. (as necessary).
• As scheduled

b. **Job Summary** Maintenance was performed on the hatchery facilities according to established schedules and procedures. Grass and bushes were trimmed on a biweekly basis. Routine maintenance was performed on the structures. In the same way, concrete tanks were drained, cleaned and repaired as needed.

c. **Significant Deviations**
No significant deviations occurred

B – OPERATION

**Job 2 - Operation of Maricau Fish Hatchery**

**OBJECTIVE 2**
*To achieve optimum hatchery production of fingerling fish under prevailing conditions.*

a. **Activities**

2.1- **Water quality and pond preparation**
Measure and record dissolved oxygen and temperature (every day), secchi disk transparency, nitrite and pH of growout pond water (three times per week), measure and record dissolved oxygen and temperature (before stocking) at each reservoir or private pond stocking site (as required), pond fertilization (as required), and zooplankton sampling and identification in growout ponds (once per week).
• As scheduled

2.2- **Fish production**
Coordination of broodstock capture, broodstock capture and maintenance, broodstock reproduction, egg disease treatment, coordination of fingerling stocking, stockings of fingerlings, fry transfer to growout ponds, fingerling harvest and transport to reservoir and tilapia and sunfish feeding (as required).
• As scheduled

2.5- **Data analysis and computerization**
Acquisition and computerization of water quality data, broodstock records, fingerling production and stocking records, analysis and integration of information (as required).
- As scheduled

2.6. Annual Report
Prepare annual report, by Mar 2010
- As scheduled

b. Job Summary
Water quality was measured as proposed. For pond fertilization, we used a combination of inorganic fertilizers and alfalfa pellets to promote microorganism growth. Adult largemouth bass were fed with tilapia fingerlings.

The following table shows a summary of T(°C), D.O. and pH for the growout ponds, for January to December 2010.

During this year, a total of 149,197 fingerlings were produced at the hatchery. Of this quantity, approximately 21,065 were tilapias, which were mainly used to feed broodstock at the hatchery or were stocked in private ponds. Nearly 128,132 fingerlings were stocked in 8 reservoirs and private ponds. Among the stocked reservoirs were Caonillas, Cerrillos, La Plata, Guajataca, Dos Bocas, Carite, Lucchetti, Cerrillos and Garzas. From this amount, 90,952 (70.98%) were largemouth bass, 36,365 (28.38%) were sunfish (redear and redbreast) and 815 (0.64%) were tilapias (Figure 1).

b. Significant Deviations
No significant deviations occurred.
Figure 1. Quantity of fingerlings stocked per species from January to December 2010.
